

Dredge Pump EDP200

The Eureka dredge pump (EDP) handles a high concentration. The efficiency is caused by the double curved impeller blades. For use in a dry environment a 60% level is needed to make the pump self-priming. The submersible version has an extra seal set on the drive shaft. The EDP pumps are built from separate wear-resistant parts to exchange wear parts easily and still work cost effective. The standard pumps have adjustable casting positions and can be mounted easily into an existing dredger. The EDP's have a long lifetime, low maintenance, optimum suction capacity and low energy consumption.

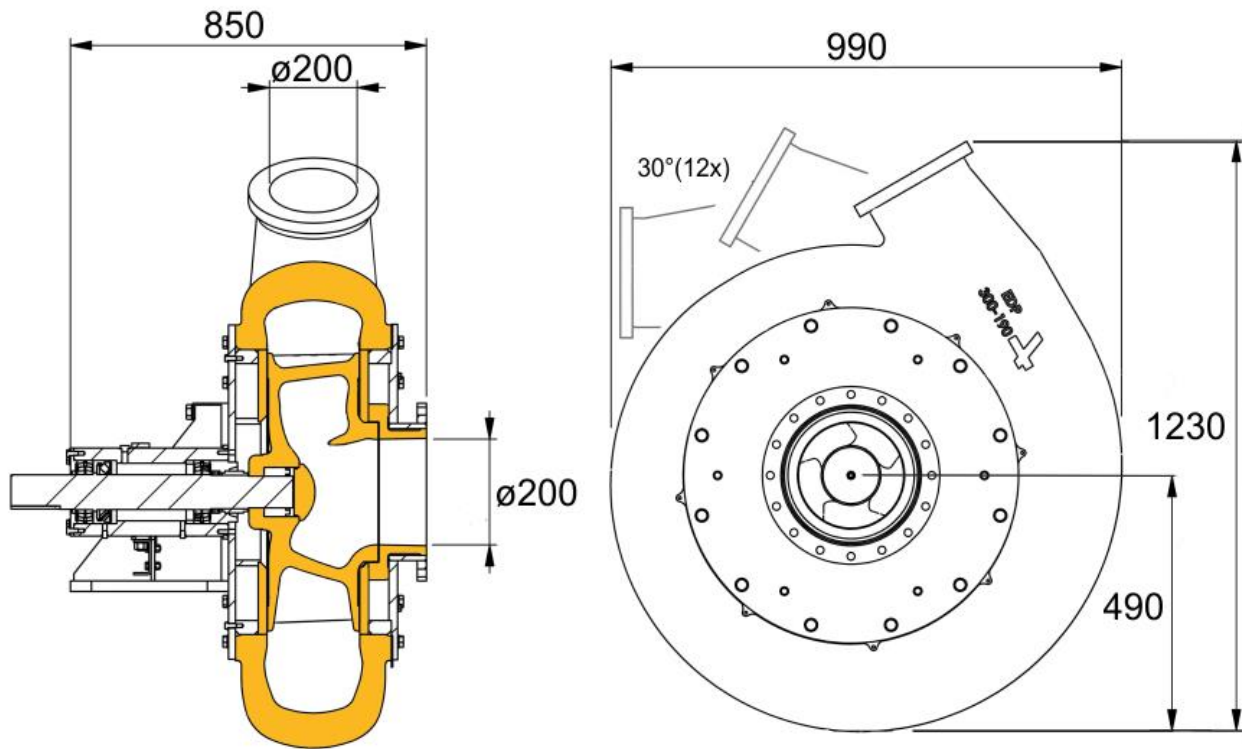

General information:

- Capacity max. 850 m³/hr
- Work pressure max. 4.5 bar
- Pump shaft speed max. 950 rpm
- Power at shaft max. 140 kW
- Suction diameter 200 mm
- Pressure diameter 200 mm
- Spherical passage 110 mm
- Blades 3 pcs
- Impeller size 600 mm
- Weight 1054 kg
- Material composition Ni-hard 4 Hardox

Dredge Pump EDP200

Main dimensions:

Delivery Pipe

Inspection hole

Cutter dredger Delta

Water jet head
